GARAGE SALE PACK · READ ME FIRST

Host Guide — a friend to help you run your sale

Everything in this pack is a plain piece of paper: print it, fill it in, tape it, cross it out, spill coffee on it. Nothing here connects to anything. The PDFs are unbranded — no logos, no links, no credit lines — so slide them right into whatever else you use.

> “A garage sale is really two events: you quietly unclutter your house for a few weeks, then a couple of hours where strangers figure out the pricing for you.” — your friendly neighbor, the pack

What's in the pack

PDF	How many copies	What it's for
01-pick-a-date-checklist.pdf	1	Choosing a date plus a three-week plan so you never panic-pricing the night before.
02-pricing-cards.pdf	2	Cut-out price cards in the default tiers ($1–$15, per-item and by-the-bag) so tagging stays simple.
03-table-sort-labels.pdf	1–2	Fold-over table labels — buyers sort themselves, so you sell instead of chat.
04-change-fund-worksheet.pdf	1	Count a $60 starting fund (or whatever suits you) and settle the box at close.
05-layout-sketch-grid.pdf	1	1 × 1 foot grid to pencil in table placement, cash box, door path, big items.
06-sale-day-signs.pdf	2–3	The main sale sign, direction arrows, and last-two-hours half-off boards in big readable letters.
07-no-sold-today-fine.pdf	1	A friendly fine ticket for the printer that never sold it (Use A) and a quiet-table postmortem (Use B).
08-resale-lot-tally-log.pdf	3–6	One venue for the whole day — then fold the rows into resale-lot-style records for online resale.

How to print the pack

- ☐ PDFs are US Letter at 100% / **“Actual size”** — don't let the printer scale them down.
- ☐ Signs (06) and labels (03) look best on a heavier stock; the rest is fine on normal paper.
- ☐ The cards and labels are grid-aligned, so scissors or a paper trimmer both work well — the cuts are dashed, and eyes forgive a lot.

Rebuilding it if you ever want to

The HTML/CSS sources are in **src/**, and one script regenerates the whole **printables/** folder:

```
python3 build.py          # builds all PDFs into printables/ (fully offline)
python3 build.py --list   # show the sheet list
pytest                    # verifies every sheet builds
```

No internet connection, no accounts, no model calls, no cloud. The tests spin up the same local builder and validate every finished PDF.

Sale-day rhythm that tends to work

- [ ] Doors open early; the haulers arrive 7 a.m. with coffee and opinions.
- [ ] Tally everything on Sheet 8 as it happens — the price is on the card, the money is in the box.
- [ ] Half off at noon; silent generosity collects smiles faster than perfect pricing collects dollars.
- [ ] Take a two-minute layout photo before open; it will help set up next year's tables.
